

1)

(a) Explain what is meant by genetic diversity.

.....

 (1 mark)

(b) Apart from genetic factors what other type of factor causes variation within a species?

.....
 (1 mark)

(c) The spotted owl is a bird. Numbers of spotted owls have decreased over the past 50 years. Explain how this decrease may affect genetic diversity.

.....

2)

The diagram shows a short sequence of DNA bases.

T T T G T A T A C T A G T C T A C T T C G T T A A T A

(a) (i) What is the maximum number of amino acids for which this sequence of DNA bases could code?

(1 mark)

(a) (ii) The number of amino acids coded for could be fewer than your answer to part (a)(i). Give **one** reason why.

.....
 (1 mark)

(b) Explain how a change in the DNA base sequence for a protein may result in a change in the structure of the protein.

.....
 (3 marks)

(c) A piece of DNA consisted of 74 base pairs. The two strands of the DNA, strands **A** and **B**, were analysed to find the **number** of bases of each type that were present. Some of the results are shown in the table.

	Number of bases			
	C	G	A	T
Strand A	26			
Strand B	19		9	

Complete the table by writing in the missing values.

(2 marks)

3)

A student investigated the rate of transpiration from privet leaves.

- She obtained two sets of ten privet leaves.
- She left the ten leaves in set **A** untreated. She covered the upper surfaces of the ten leaves in set **B** with grease.
- She weighed each set of leaves and then tied all the leaves in each set to a separate length of thread. This is shown in the diagram.

- She then weighed each set of leaves every 20 minutes over a period of 2 hours and plotted a graph of her results.

- (a) Give **two** environmental conditions that the student should have kept constant during this investigation.
- 1
- 2
- (2 marks)*
- (b) The student measured the water loss in milligrams. Explain the advantage of using ten leaves when taking measurements in milligrams.
-
-
- (1 mark)*
- (c) Explain the change in mass of untreated leaves in set **A** shown in the graph.
-
- (3 marks)*
- 5 (d) The results that the student obtained for the leaves in set **B** were different from those for set **A**. Suggest an explanation for this difference.
-
- (2 marks)*

4)

Lugworms live in mud where the partial pressure of oxygen is low. The graph shows oxygen dissociation curves for a lugworm and for a human.

a) Explain the advantage to the lugworm of having haemoglobin with a dissociation curve in the position shown.

.....
(2 marks)

(b) In humans, substances move out of the capillaries to form tissue fluid. Describe how this tissue fluid is returned to the circulatory system.

CHERRY HILL TUITION AQA BIOLOGY AS PAPER 10

Cranes are large birds. One of the earliest methods of classifying cranes was based on the calls they make during the breeding season.

- (a) Explain why biologists could use calls to investigate relationships between different species of crane.

.....
(2 marks)

- (b) More recently, biologists have used DNA hybridisation to confirm the relationships between different species of crane. They made samples of hybrid DNA from the same and from different species. They measured the percentage of hybridisation of each sample. The results are shown in the table.

Species of crane from which hybrid DNA was made	Percentage DNA hybridisation
<i>Grus americana</i> and <i>Grus monachus</i>	97.4
<i>Grus monachus</i> and <i>Grus rubicunda</i>	95.7
<i>Grus americana</i> and <i>Grus rubicunda</i>	95.5
<i>Grus rubicunda</i> and <i>Grus rubicunda</i>	99.9
<i>Grus americana</i> and <i>Grus americana</i>	99.9
<i>Grus monachus</i> and <i>Grus monachus</i>	99.8

- (b) (i) Which **two** species seem to be the most closely related? Explain your answer.

.....
(2 marks)

- (b) (ii) The biologists measured the temperatures at which the samples of hybrid DNA separated into single strands. Explain why these temperatures could be used to find the percentage of DNA hybridisation.

.....
(2 marks)

- (c) Biologists can also use protein structure to investigate the relationship between different species of crane. Explain why.

.....
(2 marks)

6)

CHERRY HILL TUITION AQA BIOLOGY AS PAPER 10

Costa Rica is a Central American country. It has a high level of species diversity.

- (a) There are over 12 000 species of plants in Costa Rica. Explain how this has resulted in a high species diversity of animals.

.....
(2 marks)

- (b) The number of species present is one way to measure biodiversity. Explain why an index of diversity may be a more useful measure of biodiversity.

.....
(2 marks)

- (c) Crops grown in Costa Rica are sprayed with pesticides. Pesticides are substances that kill pests. Scientists think that pollution of water by pesticides has reduced the number of species of frog.

- (c) (i) Frogs lay their eggs in pools of water. These eggs are small. Use this information to explain why frogs' eggs are very likely to be affected by pesticides in the water.

.....
(2 marks)

- (c) (ii) An increase in temperature leads to evaporation of water. Suggest how evaporation may increase the effect of pesticides on frogs' eggs.

.....

7)

Erythropoietin (EPO) is a substance produced in the body. It increases the production of red blood cells. Synthetic EPO is made artificially. It is used to treat patients who have a form of anaemia in which there is a reduced number of red blood cells. Scientists investigated the effect of synthetic EPO on volunteers with this form of anaemia.

- The scientists injected synthetic EPO in a salt solution into patients in the experimental groups. They also set up control groups.
- They gave the different experimental groups different doses of synthetic EPO and different lengths of treatment.
- At the beginning and end of the treatment, the scientists measured each patient's haemoglobin concentration. From these measurements, they calculated the mean increase in haemoglobin concentration.

CHERRY HILL TUITION AQA BIOLOGY AS PAPER 10

Some of the results are shown in the table.

Number of volunteers	Length of treatment / weeks	Dose of synthetic EPO / units per kilogram per week	Mean increase in haemoglobin concentration / arbitrary units
58	8	85	19.0
18	8	170	26.0
40	12	150	12.5
82	12	450	34.2
46	24	120	23.0
53	24	240	31.0

- (a) Explain why treatment with synthetic EPO affects the haemoglobin concentration in these volunteers.

 (2 marks)
- (b) Suggest how the control groups should have been treated in this investigation.

 (2 marks)
- (c) The scientists measured the dose of synthetic EPO per kilogram per week. Explain why they measured the dose per unit mass and per unit time.

 (2 marks)
- (d) Explain how the information that the scientists collected might be useful in treating patients with anaemia.

 (2 marks)
- (e) Some athletes have used synthetic EPO as a performance enhancer. Explain how synthetic EPO may improve performance in long-distance events.

 (4 marks)
- (f) Athletes may be tested to see if the concentration of EPO in their blood is above normal. Suggest how scientists determine the normal concentration of EPO in blood.

 (2 marks)
- (g) Synthetic EPO can increase blood pressure. Suggest why.

- 8) Describe how gene transmission and selection have increased the difficulty of treating bacterial infections with antibiotics.

 (6 marks)
